

Wetlands Application – 436 Lake Road, Andover
Kevin C. & Catherine A. Shea, Applicant
Peter & Susan Klock, Owner

Item 9 of the Application:

In an effort to minimize pollution to Andover Lake, the proposed home will be located 125 ft. from the lake shore and a wooded buffer is to remain between the house and the lake. Some minor activity is proposed to construct a wood mulch path to an existing wood deck and then to the lake shore for access to the water. The alignment of the path will be done in the field to minimize tree removal and grading. Additionally, the proposed septic system is located as far as practical from the lake to reduce the potential for contamination from the system. Lastly, a portion of the roof drains are being directed to the northeast away from the lake and will run overland.

Blasting will be required to complete the home some of the utilities. Pre-blast surveys will be conducted as required.

The site development plan designates locations for sediment barriers and soil stockpile areas.
