

IWWC #23-08 – 196 Lake Rd (Maynard) – Reconstruction of existing retaining wall and staircase

1 Proposed location of stone retaining wall construction and wood stair replacement near the shoreline of Andover Lake (visible in foreground).

2- Site plan for proposed wall and stairway construction/replacement.

Project Details (taken from email by applicant sent on 07.15.2023)

- *Will the wall be built by hand?*

The wall will be built by hand. (dry stacked stone)

The stairs will be built by hand.

- *Is there any excavation required to build the wall or stairs? If so, will it be completed by hand or with a machine?*

There will be a combination of hand and machine used for excavation.

- *Could you please list any erosion controls you plan to use to isolate the work area from the lake? For example, a silt fence or hay bales or straw wattles between the wall and stair construction area and the lake (depending on the type of equipment used and method of construction, these erosion controls may or may not be required).*

A silt fence will be used to isolate the work area from the lake.
