

*1 View of unused wetlands crossing, north of main wetlands crossing on the southern end of the harvest*

*2 Looking southwest toward main wetlands area. Picture is taken from main skid trail just north of the large wetlands crossing area on the southern end of the property.*

*3 Looking southwest toward main wetlands area. Picture is taken from main skid trail just north of the large wetlands crossing area on the southern end of the property.*

*4- Looking north on main skid trail, north of the large southern wetlands crossing. This area is the most rutted area of the trail and is outside the URA. Area will be filled and raked to eliminate the large rut, and will be seeded in the spring.*

*5- View of approach to wetlands crossing, which is behind me in the photo. Logs and woody debris will remain in trail to stabilize area and limit erosion into the wetland. Exposed soil will be seeded in spring.*

*6 - View of approach to wetlands crossing, which is behind me in the photo. Logs and woody debris will remain in trail to stabilize area and limit erosion into the wetland. Exposed soil will be seeded in spring.*

*7- View from northernmost wetlands crossing, which was unused in this harvest. I am looking south toward harvest area and western edges of property.*

*8- View from northernmost wetlands crossing, which was unused in this harvest. Vernal pool is over the hill in this photo.*

*9- View of northernmost wetlands crossing, which was unused in this harvest. The Vernal pool is to the right of the photo..*

*10 - View of northernmost wetlands crossing, which was unused in this harvest. Access to the west was from one crossing to the north of the main (southern crossing).*

*11 - View of wetlands crossing (the second on the map, if counting from south to north). Crossing area and watercourse is in middle of photo.*

*12 - View of wetlands crossing (the second on the map, if counting from south to north). Stream channel was left intact with minimal disturbance from temporary bridge. Tree limbs seen in photo will be left in place to stabilize approaches to the crossing.*

*13 - View of southern crossing area, looking north toward harvest area. Vernal pool is on the right in the photo.*

*14- View of southern crossing area, looking north. Vernal pool is to the right, and the main wetlands area is to the left.*
