

Tolland County Head Start

**is currently seeking Preschool children,
ages 3-5, for our FREE Home Visiting Program**

What is home visiting?

An Early Childhood Professional will visit you and your child virtually, in the community, or in your yard once a week to engage in fun & educational activities for you and your child to enjoy together.

We provide support for your whole family.

Your home visitor will tell you about resources available in your community, help with parenting challenges, and support you with your child's development.

Additional benefits include:

- Weekly playgroups
- Set educational & family goals
- Health & developmental screenings
- Free family workshops

Look what families are saying about Tolland County Head Start:

"I give Head Start a 10, an A+. My son is a senior now – he was in Head Start, and now my 4-year-old daughter is part of a Head Start home-based program. It helped me learn skills to be an active part in my community. I felt supported by my home visitor when she would remind me to utilize the resources available To me in the community." –S.H., Vernon

"I recommend Tolland County Head Start. It is very helpful, supportive and I feel that staff really care about their job and the children and you listen to me, your there and not too many people do that. My daughter asks everyday if you are coming." –L.N., Vernon

"The Tolland County Head Start program helps kids. It helped my child start talking, learn activities and learn more English. It is just like preschool, but at your home." –S.F., Vernon

"I think the program is phenomenal. I received so much information about events and resources in the community. I like the way Head Start involves all of the children in my family on our visits. The visits give me an opportunity to have one on one time with my daughter, which is time well spent." – A.A., Vernon

"Tolland County Head Start is great. It is amazing what the kids get to learn and do and it is a great support for parents too." –A.J., Vernon

"The program supported my family during the COVID-19 pandemic because they were willing to try different things to get my son interested in learning. They tried things like virtual home visits and activities, assigned reading...and had him practice his math skills... he lost interest in electronics...this is how he prefers to work!" –E.W., Stafford
